

# Bituminous Materials LLC Seal Coating and Crack Filling Services

## Seal Coating

- Pavement surface is cleaned free of debris, dirt, and dust.
- If any oil spots exist they are treated and prepped for sealing.
- Seal coating product (Polymer Modified Asphalt Emulsion Sealer) is laid out by spray or squeegee application. (As specified during the quoting process) (Sealer spec available upon request)

## Crack Filling

- Cracks requiring repair are identified.
- Cracks are cut with a routing machine to create a reservoir for material placement.
- Cracks are cleaned free of debris, dirt, and dust.
- Crack sealing compound is poured hot into the crack reservoir. Sealing compound specs are available upon request.

## Flexibility

Our team has the equipment, experienced personnel, and manufacturer relationships in place to work with any seal coating or crack filling product and their many enhancing additives. We strive to complete our jobs better, faster, and cheaper, while providing our customers with the best maintenance products and application methods available. We enjoy our flexibility of project and service in order to earn new customers and keep them. Additional product and process information will be available during the quoting process.
